Kataloger (mappar) manipuleras via standardmodulerna `os` och `pathlib`.

`pathlib` (modernt)

```
1 from pathlib import Path
2
3 p = Path("data")
4 p.mkdir(exist_ok=True)
5
6 for fil in p.iterdir():
7     print(fil.name)
8
9 for txt in p.glob("*.txt"):
10    print(txt)
```

`os` (traditionellt)

```
1 import os
2 os.listdir(".")
3 os.makedirs("ny/mapp", exist_ok=True)
4 os.path.exists("data.txt")
```
